Origination Services

LenderLive's Origination Services division offers private-labeled, fully compliant mortgage fulfillment solutions to mortgage lenders in the business of originating loans direct-to-consumer or through third parties (brokers or correspondents). Our comprehensive solutions include progressive technology and the highly-qualified staff necessary to provide complete loan fulfillment services on the client's behalf, from origination* through loan delivery.

When an end-to-end solution is not required, LenderLive's component services allow clients to outsource specific functions within the loan process, such as processing, contract underwriting, quality control and closing coordination.

Our private-labeled component services are designed to allow more flexibility and scalability for our clients, saving time to market as well as overhead and capital expenses. Each service can be tailored to the client's specific requirements by LenderLive's experienced and innovative custom development team, and delivered across our secure, leading-edge technology platform.

The LenderLive platform offers private-labeled consumer websites, as well as back office, web-based Loan Origination System (LOS) software with full document imaging. The result is a paperless workflow driven environment and a completely transparent system, unmatched in the industry. In our client-centric approach, this transparency translates into streamlined processes, more client control and better communication.

LenderLive manages the operational capacity of the client's mortgage business, lowering their initial capital investment, eliminating operational risk and ensuring all requirements and compliance regulations are met in an ever-changing industry.

*Safe Act Compliant
